#### DETAILED ACTION

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 21 and 50-54 are rejected under 35 U.S.C. 102(e) as being anticipated by Nash et al. U.S. Pat. No. 6,080,170.

Nash discloses a method for treatment of a vascular lesion, comprising the steps of introducing a guide wire into a vessel, the guidewire having an expandable occlusive member disposed on a distal end thereof (figs. 16 and 17; cols. 26-29); advancing the guidewire to a region of interest and positioning the occlusive member distally of the region of interest (figs. 16 and 17; cols. 26-29); advancing a catheter with an expandable stent over the guidewire and positioning the stent within the region of interest (figs. 16 and 17; cols. 26-29); expanding the occlusive member (figs. 16 and 17); expanding the stent within the region of interest (figs. 16 and 17);

Application/Control Number: 09/470,026

Art Unit: 3763

and aspirating fluid and embolic debris from the region of interest (figs. 16 and 17; cols. 26-29) wherein the step of aspirating fluid and embolic debris comprises the steps of infusing fluid into the region of interest through an infusion lumen and one or more infusion ports disposed on the aspiration catheter and suctioning the fluid and embolic debris from the region of interest through one or more suction lumens in fluid communication with a vacuum (figs. 16 and 17; cols. 26-29); as to claim 50-54, (figs. 16 and 17).

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 43-46 are rejected under 35 U.S.C. 103(a) as being obvious over Nash et al in view of Imran U.S. Pat. No. 5,833,650.

Nash discloses the method of for treatment of vascular lesion substantially as claimed except for wherein the expandable stent is a self-expandable stent, shape memory material, thermally adapted to expand at or near body temperature and comprises Nitinol. Imran discloses a self-expandable stent, a stent made from shape memory material such as Nitinol and a stent that is thermally adapted to expand at or near body temperature. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the stent of Nash to have the above features of Imran in order to ensure that restenosis will not take place (col. 8).
